

FPT601 Field Programmer Tool

The FPT -601 is a field programming tool specifically designed to aid commissioning of the TITAN range of BACnet enabled controllers.

This versatile hand held programming tool with LCD graphics display allows the BACnet enabled controllers to be interrogated, setup, commissioned and reconfigured on site.

Control programs for the FPT-601 are captured by downloading config files from a PC via the in built USB connection or downloading direct from a master TITAN controller. Once loaded with the appropriate control the FPT-601 can upload the files into other similar TITAN controller at the touch of a button.

Specification

Hand held device
 Size 145mm x 90mm x 28mm
 Flame retardant polycarbonate
 Powered from TITAN controller
 RJ11 (6/6) connection to controllers
 USB for PC programming
 Backlit display
 Display area 50mm wide x 30mm high
 Touch sensitive keys
 Polyester membrane
 LED indication (Pass/Fail)

Features

- Entry of MAC address
- Entry of Device ID
- Configuration of Inputs/Outputs
- Adjustment of Control parameters
- Commissioning
- Copy & Upload of Configuration
- Emulation of RDU functions
- Pass code entry for security
- RJ11 connection to controllers
- USB for PC download of new Config
