

Climate Control

The RDU range from Titan Products

Innovation and style from Titan Products

In today's modern climate where style is paramount, speed and efficiency are vital and comfort is essential, the Room Display Unit (RDU) from Titan Products will cater for your every need with minimal fuss. With a stylish and high quality finish, the RDU in combination with Titan BACnet enabled controllers will effortlessly control your environment at the touch of a button.

Hotel Innovation

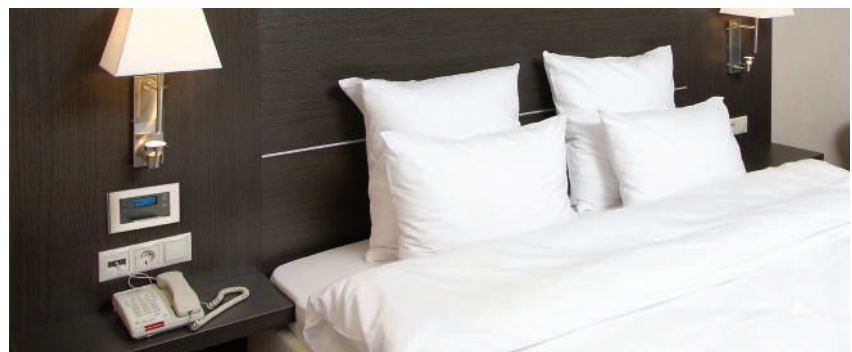

Interlock to access control
Occupancy room card
Do Not Disturb
Make My Room
Integral door buzzer

The RDU/CR is specifically designed for use in Hotel Bedrooms. When used with the FCU-4 fan coil controller, from the Titan BACnet range, it provides all the features required to ensure the occupants are provided with comfort and security. When used as part of an integrated management system features such as 'Make My Room' and 'Do Not Disturb' can be transmitted to the Hotel Letting System.

The RDU/CR can also be supplied with matching corridor plates that can incorporate the bedroom door access card reader and indication.

Fan Coil & underfloor heating control options

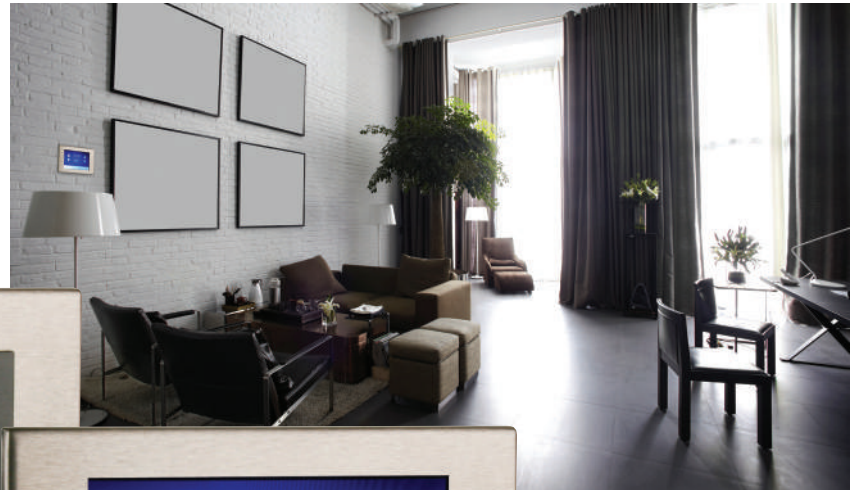

Fully compatible with Titan Products BACnet controllers

The RDU range from Titan Products is a collection of flush or surface mounted intelligent user interfaces which allow setting and indication of temperature, fan speed and other settings when used with Titan Products BACnet controllers.

Titan Products offer bespoke button functionality and layouts on the RDU-4 range while the RDU-Touch can be supplied with completely bespoke screens to suit your project or business brand.

Flush mounted RDU Touch

Time Clock Option

6 Button RDU-4 Time Scheduling interface

All BACnet controllers from Titan Products can be supplied with a flexible, built in 7-day time programmer eliminating the need for a 3rd party time clock. The attractive RDU-4 and RDU-Touch interfaces allow for the time schedule to be quickly and easily set-up for the whole apartment and overridden ON or OFF at the touch of button for each individual room.

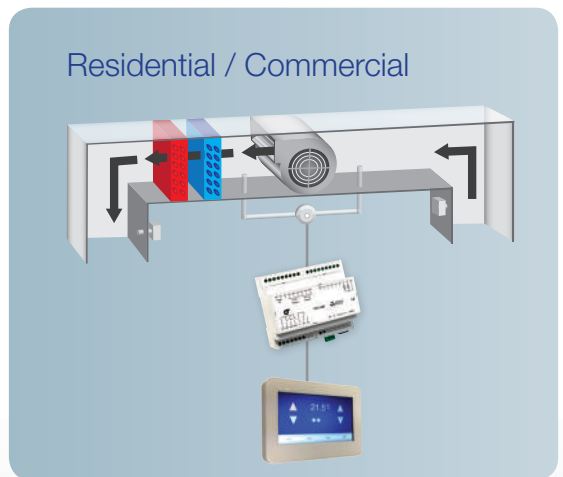

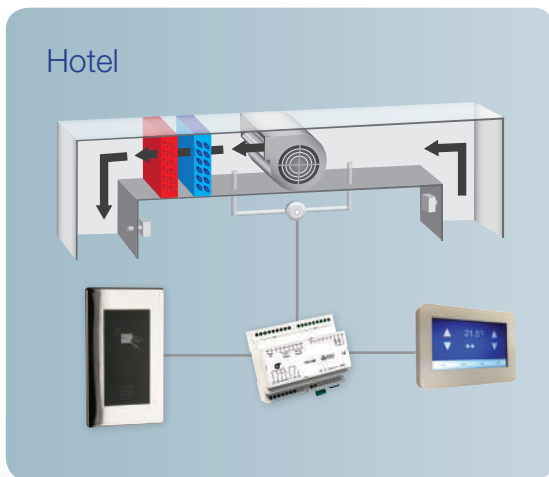

The time schedule can be broadcast across a network of controllers. This allows one time schedule to effortlessly control all controllers on the network making it the perfect solution for the residential market.
